

# Data and Information - Flat-File Databases

Y5

## KNOWLEDGE ORGANISER

### Overview

#### Flat-File Databases

-Data is raw numbers and figures. Information is what we can understand from analysing data.

-There are lots of different ways that we can collect, log and interpret data, including by using databases.

-Databases organise data so that it can be easily added to, amended, stored and accessed. Computer databases can allow large amounts of data to be sorted, filtered and edited more easily.

### Using a Computer Database

-Computer databases often contain large amounts of data. We can find the data that we need by using the 'search', 'filter' and 'sort' functions. Search functions allow us to type in the exact word/s that we are looking for. This can be useful if we are looking for a particular record.

-If we are looking for records that share certain information we can filter out data by different fields. For example, we filter in the 'age' field for all students aged 23. The database will then present only the students aged 23.

-We can also sort records by the data in particular fields. e.g. we may sort by the students' ages, from youngest to oldest. The youngest student will then appear at the top.

College Enrolment 2016 - 2017			
Student ID	Last Name	Initial	Age
ST348-245	White	R.	21
ST348-246	Wilson	P.	19
ST348-247	Thompson	A.	18
ST348-248	Holt	R.	23
ST348-249	Armstrong	J.	37
ST348-250	Graham	S.	20
ST348-251	McFadden	H.	26
ST348-252	Jones	S.	22
ST348-253	Russell	W.	20
ST348-254	Smith	L.	19

### Types of Databases

**Database:** A database is a collection of organised data that is easily stored and used. Databases often structure data in logical ways (e.g. in columns, rows and tables) so that it can be accessed by those who need it easily. Databases are made up of individual records, which contain information in different fields (categories).

**-Paper Databases:** Paper databases require the creator to manually write in individual records, and to sort the records in an appropriate order. Paper records can still be useful in small databases, particularly where information is not changing and does not need to be amended frequently. However, most large databases are now stored on computers.

**-Computer Databases:** Many computer programs allow us to create databases, e.g. *jd2data* or *Microsoft Excel*. Computer databases have become more popular than paper databases, as data can be easily and quickly added or removed, sorted, filtered, edited, or viewed at any time.

Student ID	Last Name	Initial	Age	Program
ST348-245	White	R.	21	Drafting
ST348-246	Wilson	P.	19	Science
ST348-247	Thompson	A.	18	Business
ST348-248	Holt	R.	23	Business
ST348-249	Armstrong	J.	37	Science
ST348-250	Graham	S.	20	Arts
ST348-251	McFadden	H.	26	Business
ST348-252	Jones	S.	22	Arts
ST348-253	Russell	W.	20	Business
ST348-254	Smith	L.	19	Science

### Presenting Data

-Data can be shown visually, by using graphs and charts. This allows users to quickly and easily find answers to the questions that they need. It helps the user to easily see trends and to sequence information.

-Charts and graphs can be created by selecting the charts icon and selecting which fields to display in the x-axis and y-axis.

### Using Databases

-Remember that databases are used in order to quickly and easily find information. Databases are only able to do this if the data is organised logically into clear records and fields.

-Databases are used in most institutions across the world. Think about: medical records, school student information, flight logs and business accounts.

Payer	Amount	Tax	Subtotal	Costs No Deductible
ECON59 Linda Hamilton	\$696.00	\$96.00	\$600.00	\$70.00
ECON58 Charles Harper	\$603.20	\$83.20	\$520.00	\$60.00
ECON57 Brian Perry	\$522.00	\$72.00	\$450.00	\$65.00
ECON53 Sarah Bernard	\$324.80	\$44.80	\$280.00	\$30.00
ECON52 Mary Johnson	\$174.00	\$24.00	\$150.00	\$20.00
